AutoCAD Crack+ [Mac/Win]

History The first version of AutoCAD Cracked 2022 Latest Version was released as a stand-alone software application for the Apple II computer in 1983, based on an existing Visible Objects (VOXEL) and Dymo/DXI "Data-Exchange" program. The Apple II first shipped in October 1977. Many of the original Apple II owners ended up becoming AutoCAD users; in 1986, the first year that the Apple II was the top-selling personal computer, AutoCAD made up more than 20% of all graphic-related software applications sold on the Apple II. Version 2.0 The original AutoCAD version 2.0 program was developed by Anthony Callea and released by MacDraw software on December 12, 1984, for the Apple II computer. This was the first version of AutoCAD to use the AutoCAD architecture and was a landmark in the software industry. It was a basic version with no features other than drawing, moving, and editing commands. It included a basic tool palette of generic tools and the ability to create basic command-line macros. Version 2.0 was followed by the first Macintosh version (2.1) in 1985. Version 2.1 was an advance over Version 2.0 and introduced the first version of the AutoCAD architecture. It also included the ability to import and edit DXF (AutoCAD Drawing Exchange Format) files. The program's name was changed from MacDraw to AutoCAD (AutoCad) for Version 2.0. A Windows version was introduced with Version 2.2 in 1985. The Macintosh version 2.1 was replaced by Version 2.2 in 1986. Version 2.3 AutoCAD version 2.3 was released on July 1, 1986 and introduced a new feature called vector editing, as well as the ability to create complex macros and assemble commands using dialog boxes. In addition, the program now allowed users to select drawings in the palette rather than having to open them first. AutoCAD 2.3 also provided the first non-Apple II version of AutoCAD. In 1987, the first version of AutoCAD for IBM personal computers (known at the time as PC-based CAD, or PC-CAD) was released. The PC-CAD was able to import most of the data from the AutoCAD architecture and was the first version of AutoCAD capable of importing DXF files. Version 2

v.15, released in 2007, introduced the main point feature. Before this release, two-dimensional points were found using the Point Object tool. With the release of v.15, the Point Object tool was replaced by the Point Creation feature, which can be accessed from the CUI. In January 2009, AutoCAD was awarded the

Jack Morton Award for the Environment, presented to AutoCAD in recognition of the architectural drawings produced by AutoCAD users and AutoCAD itself. In 2012, AutoCAD released a new product called AutoCAD Architecture, which is marketed as a new direct competitor to Bentley's Architectural Desktop. AutoCAD Architecture allows users to import and export native building information models such as the Building Information Model Initiative (BIM) model. The application uses cloud storage for the CAD files to allow the files to be accessible and updated from any Internet connected computer. This version also includes enhanced BIM, with new projects and scheduling features. AutoCAD Architecture is available for the Windows and Mac platforms. A version of AutoCAD Architecture for the iPad is also available. In 2014, AutoCAD introduced 16.5 user interface and functionality changes, and AutoCAD LT, now known as AutoCAD LT 20, introduced 32-bit software compatibility and a new Model Browser. In 2018, AutoCAD and AutoCAD LT were updated, introducing several new features. These include the ability to use the source model or DWG file from a GeoRSS link. The DSF format was improved with a new table format and automatic saving of default constraints to the model. Georeferencing was added to the "Export DWG to PDF" feature. The Importer's Guide was updated to include information on the new functions. AutoCAD received the 2018 ACM SIGCAD Student Technical Paper Award. Other software AutoCAD has other applications available for use through AutoCAD LT. These include: AutoCAD Architecture Architectural Assistant, a graphical software product that allows users to create and update BIM models. In fact, as Matthews explained on MSNBC's "Hardball" on Thursday, climate change projections for the U.S. have actually turned out to be "exactly what you'd expect" from climate change scientists. "If you go through the averages, what you have is exactly what you'd expect," Matthews said. "If you look at the calculations, what you have is the land areas
